The present invention describes a recombinant agfA gene (1) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEP17/TAF) nucleation depended assembly system of strains of Salmonella. Bscherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA. CsgA and AgfA-homologue fimbrin subunits, respectively; (2) directing recombinantion of a recombinant gene into the chromosome of the homologous species; (3) directing recombinant gene into the chromosome of back into the chromosome of the pack into the chromosome of the back into the chromosome of the back into the chromosome of the pack into

```
compy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid sequence or segment or assumental a. Coli or brotein containing a replacement segment or assumental and introducing the sequence or sequence grown on a Salmonella, B. coli or brotein which the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein passesses both the immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbride are usually strong inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AgfA::PT3#2 amino acid sequence SEQ ID NO:14.

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA cequence which encodes a foreign epicope or antigen. Also described are: (1) use of thin aggregative finbriae (SPEPI/TAP) nucleation depended assembly system of strains of Salmonella. Escherichia coli and Entertabacteriaces for the production of fimbriae comprising recombinant GAFA, CSAA and AgfA-homologue fimbrin subunits, respectively; (2) directing recombinant gene into the chromosome of the homologue species; (3) directing recombinant gene into the chromosome of the homologue species, replacing the native comprising separating an amologous species, replacing the native comprising separating an amologous species, replacing the native comprising separating an amologous species of foreign an immune and containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino acid polymer comprising separating an amino acid polymer comprising the polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for useful for the expension of recombinant AgfA protein which is useful for system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to copies/cell), the hybrid finbrin protein see usually strong immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier finbrial submitt proteins are usually strong immunogensity in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SDARKSETTITQSGYGNGADVGQGADNSTIELTQNGFRNNATIDQWNAKNSDITVGQYGG 120

KING J.

Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.

Disclosure; Page 136; 139pp; English

```
cc (1) use of thin aggregative fimbriae (SEP17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterbacteriaceae for the production of fimbriae comprising recombinant C AgfA, CspA and AgfA-homologue fimbrian subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the composition of a recombinant gene back into the chromosome of the homologus species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA comprising separating an amino acid polymer comprising a recombinant of protein containing a replacement segment or segments of foreign amino cortesion containing a replacement segment or segments of foreign amino cortesion containing a replacement segment or segments of foreign amino cortesion of segments of coli or acid sequence or sequences grown on a Salmonella, E. Coli or confercion animal in conjunction with a carrier or diluent. (I) is coliver into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for coli expension of recombinant AgfA protein which is useful for the expression of recombinant in Ainbrial presentation system the hererologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid finbrin protein sequence is given in manogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogensive to purify in large amount. The present sequence is given in consumption of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SDARKSETTITQSGYGNGADVGQGADNSTIELTQNGFRNNATIDQWNAKNSDITVGQYGG 120

                                                                                              The present sequence represents agfA encoded by the full agfA gene derived from Salmonella enteritidis 2765-3b. The nucleic acid can be used to provide diagnostic assays for Salmonella and/or enteropathogenic bacteria of the family Enterobacteria. It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide probes or primers which can specifically hybridise to nucleic acid molecules from greater than 99% of Salmonella strains that are pathogenic to warm-blooded animals relative to nucleic 25-MAR-2003 to correct PF field.)

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA concentration by the concentration of the production of sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbrine (SFET)/TAF) nucleation depended assembly system of strains of Salmonella. Escherichia coli and Entertorial acade for the production of fimbriae comprising recombinant CC directing recombination of a recombinant gene composing species; (3) directing recombinant gene into the chromosome of the homologous species; replacing the native comprising separating an amino acid polymer comprising a recombinant pack into the chromosome of the homologous species; replacing the native comprising separating an amino acid polymer comprising a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. Coli or Enterobacteriaceae host cell, from the host cell and introducing the contenting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to coli or system the heterologous antigens are presented in high numbers (up to confort, the carrier finbrial submit protein are usually strong immunogens, which may be important for directing an immune response conformation and adhesion properties relevant for an efficient live vaccine, the carrier finbrial submit, proteins are usually strong immunogens, which may be important for directing an immune response against the inserted equitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SDARKSETTITQSGYGNGADVGQGADNSTIELTQNGFRNNATIDQWNAKNSDITVGQYGG 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            109
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epicope or antigen. Also described are: (1) use of thin aggregative finbries (SEPIT/TAP) nucleation depended a sembly system of strains of Salmonella. Escharichia coli and Enterobacteriaceae for the production of fimbries comprising recombinant of Enterobacteriaceae for the production of fimbries comprising recombinant of a recombinant gene into the chromosome of the homologous species; (3) directing recombinant gene into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a replacement sequent or sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the containing a replacement sequencion with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogens, which may be important for directing an immune response immunogens, which may be important for directing an immune response in expression of recombinate are easy and inextend epicope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0
                                                                                                                                                                            Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  LVTRVVTHEMAHAGYGNGADVGQGADNSTIELTQNGFRNNATIDQWNAKNSDITVGQYGG 120

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (I) use of thin aggregative finbriae (SEP1/7RE) nucleation depended assembly system of strains of Salmonella, Escherichia coli and aggregative finbriae (SEP1/7RE) nucleation depended assembly system of strains of Salmonella, Escherichia coli and combinant of intecting recombination of a recombinant gene correcting recombination of a recombinant gene incoming species; (3) directing recombinant gene into the chromosome of the homologous species, replacing the native comprising separating an amino acid polymer comprising a recombinant and an interpet comprising separating an amino acid polymer comprising a replacement segment or segments of foreign anino acid sequence or sequences grown on a Salmonella, E coli or acid sequence or sequences grown on a Salmonella, E coli or acid sequence or sequences grown on a Salmonella, E coli or acid sequence or sequences grown on a Salmonella, E coli or acid sequence or sequences grown on a Salmonella, E coli or acid sequence or sequences of recombinant AgfA protein which is useful for useful for the expension of recombinant AgfA protein which is useful for useful for the carrier fimbrial submit proteins are usually strong immunogens, which may be important for directing an immune response in an animal submit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 SDARKSETTITQSGYGNGADVGQGADNSTIELTQNGFRNNATIDQWNAKNSDITVGQYGG 120

The present invention describes a recombinant agfA gene (1) where a segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA segment which encodes a foreign epitope or antigen. Also described are:

(1) use of thin aggregative fimbriae (SEP1/TAR) nucleation depended assembly system of strains of Salmonella. Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant of a recombinant gene into the chromosome of the homologue species, respectively; (2) directing recombination of a recombinant gene into the chromosome of the copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or comprising acid sequence or sequences grown on a Salmonella, E. coli or coll sequence or sequences grown on a Salmonella, E. coli or coll to the animal in conjunction with a carrier or dilutent. (I) is useful for the expression of recombinant AgfA protein which is useful for the heterologous antigens are presented in high numbers (up to Sou, 8000 copies/cell), the hybrid fimbrin protein possesses both the containing the properties relevant for an efficient live containing the containing the properties relevant for an efficient live containing the containing the properties relevant for an efficient live containing the containing the properties relevant for an efficient live containing the containing the properties relevant for an efficient live containing the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA segment with encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative finbriae (SBF1/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and assembly system of strains of Salmonella, Escherichia coli and assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of finbriae comprising recombinant of a recombinant gene into the chromosome of the homologous species; (3) directing recombinant gene into the chromosome of the homologous species, splacing in an animal. Comprising separating an amino acid polymer comprising a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the coll seful for the expression of recombinant AgfA protein which is useful for the expression of recombinant AgfA protein which is useful for system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to compicine, the expression properties relevant for an efficient live vaccine, the expression properties relevant for an efficient live vaccine, the expression properties relevant for an efficient live vaccine, the expression properties relevant for an emalally strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present easy and inexpensive to purify in large amount. The present sequence is given in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.

                                                                                                                                                                                                                                                                                                       8
                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (I) use of thin aggregative fimbriae (SEFI)/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of imbriae comprising recombinant AgfA, CsgA and AgfA-homologue finbrin subunits, respectively; (2) directing recombination of a recombinant gene back into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, porterin contraining a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                   SDARKSETTITQSGYGNGADVGQGADNSTIELTQNGFRNNATIDQWNAKNSDITVGQYGG 120

Also described are:
                                                                                                                                                                                                                                                                                                                              무
Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) useful for the expression of recombinant AgfA protein which is useful eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copieso/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     à
cc assembly system of strains of Salmonella, Escherichia coli and assembly system of strains of Salmonella, Escherichia coli and assembly system of strains of Salmonella, Escherichia coli and cc assembly system of strains of Salmonella, Escherichia coli and defended coli and strains of strains of sepactively, (2) directing recombination of a recombination of comprising separating an aimon acid polymer comprising a replacement sequent or sequence of sequences or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or consequity of an animal in conjunction with a carrier or diluter. (1) is useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to concorne, the carrier fimbrial submuit protein are usually strong immunogens, which may be important for directing an immune response or inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SDARKSETTITOSGYGNGADVGQGADNSTIELTONGFRNNATIDQWNAKNSDITVGQYGG 120

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA cequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbrise (SETIA/TAP) nucleation depended assembly system of strains of Salmonella, Escherichia coli and contained by a comprising recombination of the comprising recombinant of directing recombination of a recombinant gene into the chromosome of the composition of a recombinant gene copy of that gene; and (4) eliciting an immune response in an animal, comprising separating a manimo acid polymer comprising recombinant AgfA protein containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino containing a replacement segment or segments or dilutent. (I) is useful for the expression of recombinant AgfA protein which is useful containing an immune response in an animal. In a fimbrial presentation system the hererologous antigens are presented in high numbers (up to system the hererologous antigens are presented in high numbers (up to concise, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an easy and carrier the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ó
Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 SDARKSETTITOSGYGNGADVGOGADNSTIELTONGFRNNATIDOWNAKNSDITVGOYGG 120

The present sequence represents an agfA fragment encoded by an agfA gene fragment derived from Salmonella enteritidis 27655-3b ThiphoA mutant strain. The nucleic acid can be used to provide diagnostic assays for Salmonella and/or enteropathogenic bacteria of the family Enterobacteria. It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide proteins or primers which can specifically hybridise to nucleic acid molecules from premers which has been seen as a serial strains that are pathogenic to warmblooded animals relative to uncleic acid molecules from other microbial organisms. (Updated on 25-MAR-2003 to correct PF field.)

Patent No. 6277613

GENERAL INFORMATION:

APPLICANT: de Lange, Titia

APPLICANT: Smith, Susan

TITLE OF INVENTION: A PROTEIN THAT BINDS TO TRF1 AND METHODS

TITLE OF INVENTION: OF USE THEREOF

NUMBER OF SEQUENCES: 12

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     11.8%; Score 92; DB 4; Length 673; 30.4%; Pred. APPLICANT: White, Aaron P.

APPLICANT: White, Aaron P.

APPLICANT: Collinson, S. Karen

TITLE OF INVENTION: PRESENTATION OF HETEROLOGOUS PEPTIDE SEQUENCES

FILE REFERENCE: 920043.406

CURRENT APPLICATION NUMBER: US/09/543,407

CURRENT FILING DATE: 2000-04-05

NUMBER OF SEQ ID NOS: 59

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 12

LENGTH: 151
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
Sequence

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A. Description:
A. Description:
A. Description:
A. Cross-reference and the fibronectin, plasminogen, tissue plasminogen activator
A. Note: fimbriae bind to fibronectin, plasminogen, tissue plasminogen activator
A. Note: fimbriae bind to fibronectin, plasminogen, tissue plasminogen activator
B. 1-21/Domain: signal sequence #status predicted <AMT>
F;22-151/Product: fimbrin protein agfB #status predicted <AMT>
